

STATICS

Chap. 12 of Wolfson

What you will learn

- ❑ Condition for static equilibrium
- ❑ How to *efficiently* solve a static eq. problem
- ❑ Different types of equilibrium

Static equilibrium

3

$$\sum \vec{F}_{i,ext} = 0 \quad \text{and} \quad \sum \vec{\tau}_{i,ext} = 0$$

- The net torque should be zero, around **any** axis.
- However, if the net torque is zero for one axis of rotation, then it is zero for *any* axis of rotation, as long as the net force is zero (as in here). So, we are free to make any convenient/efficient choice of the axis of rotation!

Proof:
$$\begin{aligned} \sum \vec{\tau}_{i,A,ext} &= \sum \vec{r}_{i,A} \times \vec{F}_{i,ext} = \sum (\vec{r}_{i,B} + \vec{r}_{AB}) \times \vec{F}_{i,ext} \\ &= \sum \vec{\tau}_{i,B,ext} + \vec{r}_{AB} \times \sum \vec{F}_{i,ext} \quad (\text{now use } \sum \vec{F}_{i,ext} = 0) \\ &= \sum \vec{\tau}_{i,B,ext} \end{aligned}$$
 where A and B are two reference frames.

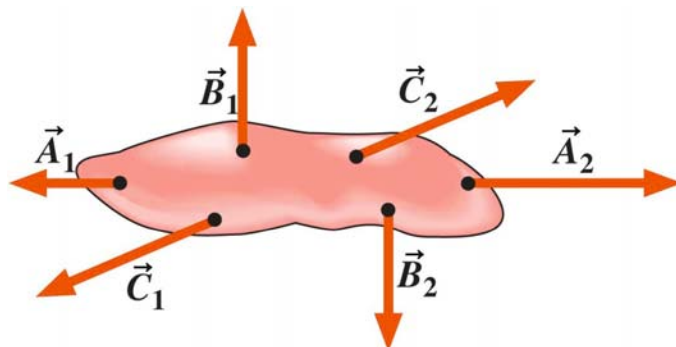

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

Quiz

4

- The figure shows three pairs of forces acting on an object. Which pair, acting as *the only* forces on the object, results in static equilibrium?

- A. Force pair $\vec{A}_1 + \vec{A}_2$
- B. Force pair $\vec{B}_1 + \vec{B}_2$
- C. Force pair $\vec{C}_1 + \vec{C}_2$

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

The center of gravity

5

- Coincides with the center of mass, when the gravitational field is uniform.
- This is the point at which the gravity is applied!

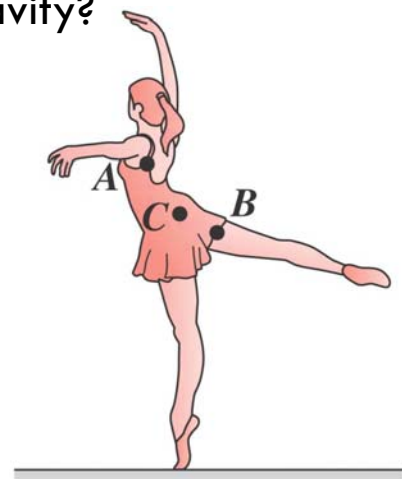

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

Quiz

6

- The dancer in the figure is balanced; that is, she is in static equilibrium. Which of the three lettered points could be her center of gravity?

- A. Point A
- B. Point B
- C. Point C

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

Quiz

7

- The figure shows a person in static equilibrium leaning against a wall. Which one of the following must be true?
- A. There must be a frictional force at the wall, but not necessarily at the floor.
 - B. There must be a frictional force at the floor, but not necessarily at the wall.
 - C. There must be frictional forces at both wall and floor.

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

At what angle will the ladder slip?

8

$$\sum F_x = 0 : \mu n_1 = n_2$$

$$\sum F_y = 0 : n_1 = mg$$

Smart choice of the origin
for torque calculation:

Where the ladder touches the floor.

$$\sum \tau = 0 : Ln_2 \sin \phi = \frac{L}{2} mg \cos \phi$$

$$\tan \phi = 1/(2\mu)$$

$\phi = \arctan(\frac{1}{2\mu})$ is the answer.

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

Not all equilibrium states are stable!

9

Stable equilibrium:
disturbed ball will return
to equilibrium

(a)

Neutrally stable
equilibrium

(c)

Unstable equilibrium:
disturbed ball will leave
original equilibrium

(b)

Metastable or
conditionally stable or
“locally stable”
equilibrium:
ball returns for small
disturbances, but not
for large ones

(d)

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

Potential energy and equilibrium

10

Consider $U = U(q)$

$q = x$ (mass on spring, e.g.) or

$q = \theta$ (pendulum, bear on high wire, e.g.)

Equilibrium: $dU/dq = 0$

Stable Equilibrium: $dU/dq = 0, d^2U/dq^2 > 0$ (meta or not)

Unstable Equilibrium: $dU/dq = 0, d^2U/dq^2 < 0$

Neutrally Stable Equilibrium: $dU/dq = 0, d^2U/dq^2 = 0$

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

Quiz

11

- Which of the labeled points in the figure is in metastable equilibrium?

Phys 6A, UCSC, (c) 2008, G.-H. Gweon

12

Concluding with ? ... !

- What are the conditions for static equilibrium?
- For an object to stand, the projection of the center of gravity should fall within the basal contact area. Why?
- How do you analyze the stability of a leaning ladder?
- How do you tell the existence and the stability of static equilibrium from the potential curve such as $U(x)$ or $U(\theta)$?

Phys 6A, UCSC, (c) 2008, G.-H. Gweon
